# Option #3 - Video Feedback

You can add another dimension by recording **video feedback** for your students. Instead of just hearing your voice, the student can watch a video of you scrolling through their document, highlighting different sections, and narrating your comments about their work.

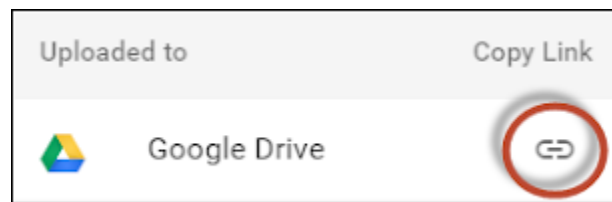

The easiest way to create video comments for a Doc (or any student work) is with the **Screencastify Chrome web extension.** Screencastify is a great extension that lets you:

- Record your screen, webcam, and voice.
- Record up to 10 minutes at a time for free.
- Save the video to Google Drive.

Once you have the Screencastify extension installed you can record video feedback as follows:

- Bring up the Doc you want to create a feedback video for.
- Click the **Screencastify** extension.
- Select the **"Browser Tab"** option or **"Desktop"** option depending on how much of the screen you want to record.
- Select your **microphone** from the menu.
- Choose to embed your **webcam** if you want (a small video from your webcam will be placed in the corner of the recording).
- Finally click **"Start Recording"**.
- Now speak your feedback as you scroll through the Doc, while Screencastify records everything on the screen and everything you say.
- When done click the Screencastify extension again and click **"End Recording"**.
- You will now see the recorded video to review if you wish.
- Give the video a relevant name by clicking on the **title** in the top left of the screen.
- Next click Google Drive **"Copy Link"** icon in the top right corner of the screen to share the video and copy the link.
- The link to the video can now be **pasted** into the Doc for the student to click and watch your video feedback.
